

Expected returns, consumption, and the business cycle on global stock markets

DISSERTATION
der Universität St. Gallen,
Hochschule **für** Wirtschafts-,
Rechts- und Sozialwissenschaften (HSG)
zur Erlangung der Würde eines
Doktors der Wirtschaftswissenschaften

vorgelegt von

Wolfgang Drobetz

aus

Oesterreich

Genehmigt auf Antrag der Herren

Prof. Dr. Heinz Zimmermann

und

Prof. Dr. Alex Keel

" Dissertation Nr. 2404

Deutscher Universitäts-Verlag GmbH, Wiesbaden'

Contents

List of tables	XVII
List of figures	XIX
1 Introduction	1
1.1 Challenges in 'asset pricing theory'	2
1.2 Focus and structure of the study	4
2 Theory of asset pricing	9
2.1 The consumption-based asset pricing model	11
2.2 The permanent income hypothesis	13
2.3 Risk correction and mean-variance frontier	16
2.4 Properties of the stochastic discount factor	20
2.4.1 Contingent claims and the bundling equation	20
2.4.2 Risk neutral probabilities	21
2.4.3 Optimal behavior in the contingent claim context	22
2.4.4 Complete market rule of complete risk sharing	23
2.4.5 Law of one price and existence of a discount factor	24
2.4.6 No-arbitrage and positive discount factors	26
2.5 Power utility in a lognormal pricing model	27
2.5.1 The equity premium puzzle	29
2.5.2 The risk-free rate puzzle	31
2.6 Heterogeneous agents and incomplete markets	34

2.7	A first synthesis in asset pricing	40
2.8	Production and equilibrium considerations	46
2.9	Linking the discount factor view with beta pricing models ,	48
2.9.1	Beta pricing models	48
2.9.2	From the Euler-equation to a single beta representation	50
2.9.3	Beta pricing models and linear discount factor models,	51
2.9.4	Testing for priced factors	53
2.9.5	Some important implications .	' 5 4
2.10	Conditional asset pricing	56
2.11	Factor pricing stories • •	62
2.11.1	The capital asset pricing model	63
2.11.2	The intertemporal capital asset pricing model	64
2.12	Summary of major findings in. this chapter ,	69
3	Theory of international asset pricing ,	71
3.1	Puzzles in international finance	72
3.1.1	The home bias in consumption	73
3.1.2	The equity home bias	77
3.2	Classical issues in international asset pricing	80
3.2.1	The nominal and the real capital asset pricing model	81
3.2.2	Models accounting for purchasing power deviations	82
3.2.3	International portfolio theory '	83
3.2.4	The international capital asset pricing model	86
3.2.5	An international model in the absence of inflation risk	88
' 3.2.6	A model without differences in the consumption and investment opportunity sets " •	92
3.3	Other asset pricing models applicable to international returns	94
3.3.1	The international consumption capital asset_ pricing model	94
3.3.2	International beta pricing models	96

3.4	Summary of major findings in this chapter	99
-----	---	----

Time varying expected returns and the business cycle on international financial markets 101

4.1	Predictable components in international stock returns	104
4.1.1	An instrumental variable forecasting model	105
4.1.2	Economic interpretation of instrumental variable forecasting models	107
4.1.3	Identifying the business cycle component	111
4.2	Exploring the economic foundations of instrument variables	113
4.2.1	Correlation with macroeconomic environment	113
4.2.2	Local versus global instrument variables	115
4.2.3	Description of global instrument variables	116
4.3	Data Description	123
4.4	Empirical results	130
4.4.1	Stock returns and future growth rates of industrial production	130
4.4.2	Stock returns and global instrument variables	135
4.4.3	Exploring the business cycle component	145
4.5	Summary of major findings in this chapter	151

Testing a conditional version of the consumption-based asset pricing model 155

5.1	Latent variable models	157
5.1.1	Beta pricing models again	158
5.1.2	Derivation of latent variable models	160
5.1.3	Linear conditional covariance ratios	167
5.1.4	A model with a conditional consumption beta	168
5.2	Integration of international capital markets	172

5.2.1	Integration as a pricing concept	172
5.2.2	Integration and correlation	174
5.2.3	Integration and legal barriers	175
5.2.4	Integration and the cost of capital	175
5.2.5	Empirical tests for integration	177
5.3	Empirical results for models with unspecified state variables	179
5.3.1	Single latent variable models	179
5.3.2	Double and triple latent variable models	183
5.3.3	Models with a conditional consumption beta	194
5.3.4	Using mimicking portfolios for consumption	201
5.3.5	A simple one-factor model with an observable factor	203
5.4	Summary of major findings in this chapter	206
Volatility bounds for stochastic discount factors on global financial markets		209

6.1	Stochastic discount factors and asset pricing	211
6.1.1	Moment implications for stochastic discount factors	212
6.1.2	Hansen-Jagannathan volatility bounds	214
6.1.3	The equity premium puzzle revisited	218
6.1.4	The correlation puzzle	220
6.1.5	The link to the traditional mean-variance world	222
6.1.6	Incorporating conditioning information	224
6.2	Tests of mean-variance spanning	229
6.2.1	A spanning test based on maximum likelihood	230
6.2.2	A spanning test based on latent variable models	231
6.2.3	A spanning test based on HJ volatility bounds	232
6.3	Characteristics of input data	238
6.3.1	Description of return index series	238
6.3.2	Time series characteristics of return indices	240
6.4	Empirical results	244

6.4.1	Methodological issues	244
6.4.2	Unconditional bounds for developed stock markets	247
6.4.3	Conditional bounds for developed stock markets	249
6.4.4	Bounds for emerging stock markets	251
6.5	Summary of major findings in this chapter	255
7	Mean reversion and rational pricing on global stock markets	259
7.1	Expected returns, consumption, and the business cycle	261
7.2	An economic model for time varying expected returns	271
7.2.1	Predicting returns in an efficient stock market	271
7.2.2	Habit formation	273
7.2.3	The consumption-based model revisited	275
7.3	Estimation of the endowment process	278
7.3.1	A regime-switching model for consumption growth	278
7.3.2	Equilibrium asset prices	279
7.4	Empirical results	280
7.4.1	Maximum likelihood estimates of the regime switching model	280
7.4.2	Variance ratio's	286
7.5	Portfolio advice in a mean reverting world	295
7.6	Summary of major findings in this chapter	300
8	On the contributions of this study	305
	Bibliography	309
