Preface	xiii
Acknowledgments	xv
Chapter 1	i
Writing Papers	1
1 <i>General Principles</i>	2
1.1 Write So That You Will Not Have to Be Read	2
1.2 Don't Forget How You Made Your Discoveries	2
1.3 Don't Forget Your Errors	3
1.4 Demonstrate the Originality and Significance of Your Contribution	4
1.5 Understand the Function of Each Component of Your Paper	4
1.6 In the Literature Review, Tell a Story—Don't Enumerate	6
2 <i>Notation</i>	7
2.1 Learn ETgX or a Related Program	7
2.2 Choose Easily Recognizable Notation	8
2.3 Choose Mnemonic Abbreviations for Assumptions and Properties	11
2.4 Use Only Notation You Can Easily Pronounce or Draw on the Board	13
2.5 Don't Introduce Notation You Will Use Only Once or Twice	14
2.6 Respect the Hierarchy of the Different Parts of a Paper	14
2.7 Choose Notation Resulting in Uncluttered Mathematical Expressions	15

<i>3</i>	<i>Definitions</i>	<i>17</i>
3.1	Don't Assume Readers' Familiarity with Your Terms and Definitions	17
3.2	Make It Clear When You Are Defining a New Term	18
3.3	Indicate the Kind of Mathematical Object Each New Notation Designates	19
3.4	Give Examples Illustrating Novel Definitions	19
3.5	Separate Formal Definitions from Interpretations	22
3.6	Present Basic Concepts in Their Full Generality	24
3.7	Write in Logical Sequences	24
3.8	Don't Collapse Two or Three Similar Statements into One	27
3.9	When Defining a Concept, Indicate What It Depends on	27
3.10	Be Unambiguous and Consistent in Quantifications	28
3.11	Don't Use Different Terms or Phrases for the Same Concept	29
3.12	Name Concepts Carefully	30
3.13	Avoid Unnecessary Technical Jargon	31
3.14	Challenge Dominant But Inadequate Terminology and Usage	32
3.15	Use Technical Terms Correctly	34
3.16	Clean Up Your Text	34
<i>4</i>	<i>Models</i>	<i>36</i>
4.1	Understand the Role of Models	36
4.2	Introduce Your Model by Moving from Infrastructure to Superstructure	36
4.3	Avoid Long Sentences	37
4.4	Redundancy Is Useful, But Don't Overdo It	38
4.5	Don't Be Shy About Explaining Very Simple Things	39
4.6	Beware the Apparent Simplicity of Numerical Examples	40

4.7	If You Name Your Agents, Do So in a Helpful Way	42
4.8	Use One Enumeration for Each Object Category	43
4.9	State Assumptions in Order of Decreasing Plausibility or Generality	44
4.10	Group Assumptions by Category	44
4.11	Figure Out and Indicate Logical Relations among Assumptions and Groups of Assumptions	45
4.12	Make Sure There Are Objects Satisfying All Your Assumptions	47
4.13	Use a Common Format for Formal Statements of Results and Similar Parts of Proofs	47
5	<i>Theorems and Proofs</i>	49
5.1	Choose the Right Mixture of Words and Mathematics in Proofs	49
5.2	Divide Proofs into Clearly Identified Steps or Cases	50
5.3	Gather in Front of a Conclusion All the Conditions Needed to Reach It	51
5.4	Pay Special Attention to Quantifications	52
5.5	Specify Precisely the Assumptions, or Particular Parts of Them, Used in Each Step	53
5.6	Don't Leave (Too Many) Steps to the Reader	54
5.7	Use a Consistent Writing Style	54
5.8	Be Consistent in Choosing Running Indices and Quantifications	56
5.9	Don't Use Quantifiers in an English Sentence	57
5.10	Show Clearly Where Each Proof Ends	59
5.11	If You Think a Step Is Obvious, Look Again	59
5.12	Verify the Independence of Your Hypotheses	59
5.13	Explore All Possible Variants of Your Results	60
6	<i>Use Pictures</i>	61
6.1	Prepare the Ground	62
6.2	The Edgeworth Box	63
7	<i>Conclusion</i>	66

8 *Related Literature* 68

9 *References* 69

## **Chapter 2 Giving Talks 71**

1 *How Is an Oral Presentation Different from a Paper? How Is It the Same?* 71

1.1 Advantages of Oral Presentations 72

1.2 Difficulties of Oral Presentations 74

2 *Preparing Yourself* 75

2.1 The Benefits of Explaining Aloud 76

2.2 The Benefits of Practice 76

3 *Facing the Audience* 78

3.1 What Can You Expect the Audience to Know? 78

3.2 Looking Backward and Forward 78

3.3 Forgetting 80

3.4 Making Mistakes 81

3.5 Digressing 81

3.6 Making Jokes 82

3.7 Being Flexible 82

3.8 Surprising Your Audience 83

4 *Interacting with the Audience* 84

4.1 Answering Questions 84

4.2 Choosing Pitch and Pace 85

4.3 Bringing Attention (Back) to Yourself 85

5 *Transparencies* 86

5.1 Benefits of Transparencies 86

5.2 Preparing Transparencies 88

5.3 Using Transparencies 91

5.4 Two Examples 92

6 *Proofs?* 95

7 *Writing on the Board* 97

7.1 Restrict Yourself to a Few Colors 97

7.2 Use as Little Notation as Possible 98

- 7.3 Write Formulas from the Inside Out 99
- 7.4 Watch Your Subscripts and Superscripts 100
- 7.5 Use Common Formats 100
- 7.6 Divide for Emphasis 101

8 *Conclusion* 101

9 *References* 101

### **Chapter 3 Writing Referee Reports 103**

1 *Components of a Report* 103

1.1 Summary 104

1.2 Overall Evaluation 104

1.3 Comments on Model and Results 105

1.4 Comments on the Exposition 107

2 *Distinguish between Nonnegotiable Requests and Suggestions for Changes* 108

3 *Evaluating Revisions* 109

4 *Length and Style of the Report* 110

5 *The Cover Letter* 110

6 *General Recommendations* 111

6.1 Expressing Judgment 112

6.2 When Is Withholding Judgment Appropriate? 113

6.3 The Referee's Responsibilities to the Journal and to the Author 113

7 *Deciding Whether to Accept a Refereeing Job* 114

8 *Benefits to You of Your Refereeing Work* 117

9 *References* 118
