

FACETS OF SYSTEMS SCIENCE

SECOND EDITION

George J. Klir

*State University of New York at Binghamton
Binghamton, New York*

Kluwer Academic/Plenum Publishers
New York, Boston, Dordrecht, London, Moscow

Contents

Part I	SYSTEMS SCIENCE: A GUIDED TOUR	1
Chapter 1	What Is Systems Science?	3
Chapter 2	More about Systems	9
	2.1. Common-Sense Definition	9
	2.2. More about Relations	13
	2.3. Constructivism versus Realism	19
	2.4. Classification of Systems	24
	Exercises	28
Chapter 3	Systems Movement	31
	3.1. The Role of Mathematics and Computer Technology	31
	3.2. Systems Thinking	37
	3.3. Other Relevant Developments	47
	3.4. Two-Dimensional Science	52
	Exercises	54
Chapter 4	Conceptual Frameworks	55
	4.1. Introduction	55
	4.2. Deductive Approaches	56
	4.3. Inductive Approaches	61
	4.4. Epistemological Categories of Systems	63
	4.5. Epistemological Hierarchy of Systems	86
	Exercises	87
Chapter 5	Systems Methodology	89
	5.1. Systems Problem Solving	89
	5.2. General Systems Problem Solver	93
	5.3. Systems Modeling	95

5.4. Classification of Systems Models	98
5.5. Systems Modeling in a Broader Sense	101
5.6. Methodological Role of the Computer	105
Exercises	106
Chapter 6 Systems Metamethodology	109
6.1. Problems versus Methods	109
6.2. Characteristics of Methods	110
6.3. Methodological Paradigms	112
6.4. Examples of Methodological Paradigms	113
Exercises	121
Chapter 7 Systems Knowledge	123
7.1. Traditional Knowledge versus Systems Knowledge	123
7.2. Systems Science Laboratory	124
7.3. Laws of Systems Science	125
7.4. Metamethodological Inquiries	128
Exercises	133
Chapter 8 Complexity	135
8.1. What Is Complexity?	135
8.2. Complexity and Information	137
8.3. Bremermann's Computational Limit	144
8.4. Computational Complexity	149
Exercises	157
Chapter 9 Simplification Strategies	159
9.1. Complexity versus Simplicity	159
9.2. Systems Simplification: A General Formulation	161
9.3. Special Simplification Strategies	162
Exercises	168
Chapter 10 Goal-Oriented Systems	171
10.1. Goal and Performance	171
10.2. Paradigms of Goal-Oriented Systems	175
10.3. Adaptive Systems	177
10.4. Special Types of Goal Orientation	183
Exercises	190

Chapter 11 Systems Science in Retrospect and Prospect 191

 11.1. Criticism 191

 11.2. Status and Impact of Systems Science 197

 11.3. The Future of Systems Science 213

Appendix Mathematical Terminology and Notation 219

References 223

Part II CLASSICAL SYSTEMS LITERATURE 235

 Introduction and Comments 237

 Detailed Contents 239
